

Recitation 14 - #2

Team Name: Team Two

Team Members: Dylan Kriegman, Caleb Jimenez, Ryan Stone, Marcus Chong, Florian Frick, Noah Warren

Application Name: Buff Forums

Version Control: [Github Repository Link](#)

Development Method: [JIRA Board Link](#)

Completed Features

- The HTML and CSS of the web pages
- The database architecture

What worked during the demo

- The basic CSS and HTML for the home, detailed post, creating a comment, creating a post, and registration pages
- Password entry verification

Issues faced during development and demo

- Javascript to navigate between pages.
- Creating a database with foreign and primary keys before the lecture on it.
- Integration between the database and the webpage.

Suggestions offered by the TA

- Make it appear as though "Delete" and "Edit" are different buttons on the detailed post page.
- Later down the line, image upload to the database should be possible.
- By our next meeting, we should have the navigation bar and registration page set up.
- We should also have a feature connected to our database.
- The webpage should have a background.

Individual contributions
